## Meal deliveries

Pushing refrigerated and heated tray delivery units present serious risks of manual handling injuries, while obscured vision increases the risk of accidents and collisions. Our Transpak provides a powered platform to overcome these issues.

The Transpak is an electronically powered drive unit designed to permanently convert a manual handling trolley into a motorised trolley.

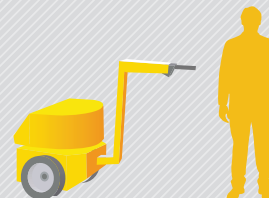

### ✗ THE PROBLEM

Manual pushing of heavy loads is both dangerous and time consuming; typically requiring multiple workers to reduce risks.

### THE SOLUTION ✓

OR

A single Electrodrive Transpak allows individual operators to move thousands of kilograms safely. Your productivity and safety improves.

The **Transpak**

Safety. Productivity. Certainty.

# Transpak

by Electrodrive

## Performance is standard

The Transpak comes with its own chassis, swivel castors, battery pack, control unit and tiller steering or twist grip and replaces the existing castors.

It fits easily beneath food trolleys, bain-maries and cook/chill units.

The Electrodrive Transpak allows a single person to effortlessly move heavy trolleys throughout your facility.

Comprehensive leasing, maintenance & training support is available, and covered by a 12 month warranty.
